

From ERP Data to Maintenance Decisions with **AMMS**

AMMS is a lightweight maintenance dashboard that plugs directly into your current ERP system—SAP, Dynamics, IFS, or any other—to consolidate live equipment and inventory data in one intuitive overview. Seamlessly update ERP records, predict parts demand, and schedule service automatically, cutting downtime and errors without disrupting your existing architecture.

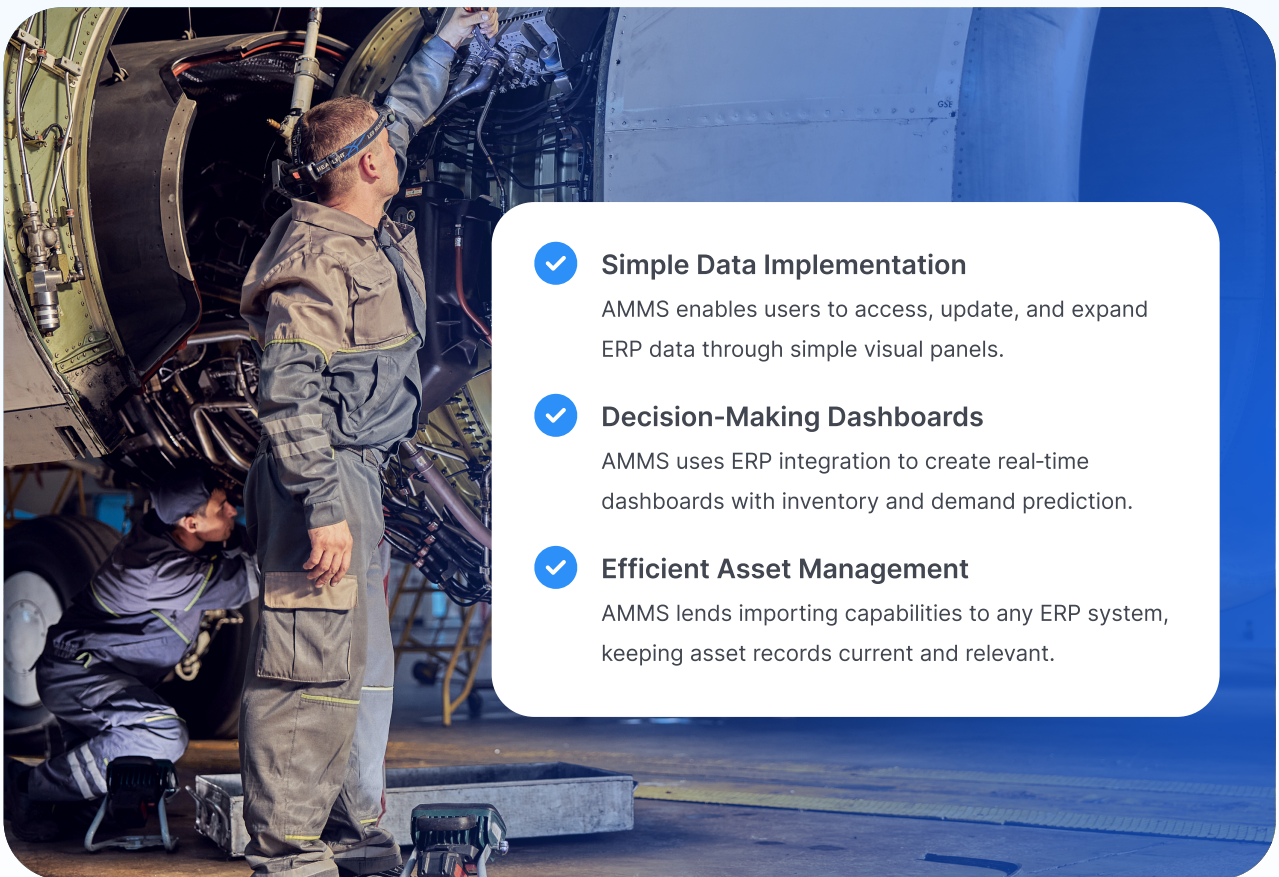

AMMS enhances the systems you already trust, making adoption instant and low-risk. Secure connectors merge stock, usage, and sensor data into visual control panels that alert to shortages, anticipate errors, value inventory, and guide spending. Add new equipment or revisions in minutes and synchronize the data back to any ERP system.

This way, your technology stack remains intact, but AMMS unlocks its value.

Developed in collaboration with

Simple Data Implementation

AMMS enables users to access, update, and expand ERP data through simple visual panels.

Decision-Making Dashboards

AMMS uses ERP integration to create real-time dashboards with inventory and demand prediction.

Efficient Asset Management

AMMS lends importing capabilities to any ERP system, keeping asset records current and relevant.
